SCHEMATIC DESIGNS ONLY - NOT VALIDATED CONSTRUCTION DOCUMENTS

WHAT THIS ATLAS CONTAINS

A transparent portfolio of drawings exported from the existing V4 code

SCOPE & METHOD

Every diagram in this PDF was created by the actual Architect AI Studio V4 generator and SVG renderer. No plan geometry was hand-drawn or retouched for these pages. The 35 scenarios contain 26 distinct base-floor geometries; some repeat a floor arrangement while changing the property type, site facilities or floor count.

35	4	0	25
VALIDATED CASES	PROPERTY TYPES	V4 VALIDATOR ERRORS	WITH EXTERNAL-WINDOW WARNINGS

WHAT THE LABELS MEAN

VALID The model passed the checks implemented in the V4 validation engine. It does NOT prove regulatory compliance, architectural quality, safe construction, or accessibility.

WARNINGS Potentially unresolved concerns, including rooms without modeled external windows, lift design and vehicle swept paths. Their counts are disclosed for each example.

REPEATED FLOORS For multi-level residential examples, the V4 generator currently duplicates the base floor geometry at upper levels. The catalog displays this honestly and does not claim separately optimized storeys.

IMPORTANT LIMITATION

These are architectural concept studies, not professional working drawings. No building codes, emergency egress, structural analysis, accessibility standards, daylight calculations, acoustic separation or MEP coordination have been certified.

REPRODUCIBILITY & COVERAGE

What was generated - and what V4 still cannot provide

COMPLETE COVERAGE

VILLA	**11 cases**	1-4 bedrooms, irregular/wing, garage, lawn, surface parking, multi-level
DUPLEX	**3 cases**	One home across floors, stairs, optional lift/shaft
APARTMENT	**14 cases**	1-4 flats/floor, opposed or linear corridor, multiple levels, lift
MIXED USE	**7 cases**	Retail/office ground floor with upper residences, parking and cores

SOURCE OF EACH PLAN

The project.json files preserve the V4 PropertyProject 2.0.0 model. The site.svg and floor_L0.svg / floor_L1.svg drawings were produced by architect.property_render. This PDF was assembled from those SVG files without modifying any of the walls, furniture, labels, or dimensions.

KNOWN LIMITATIONS

V4 is a schematic typology-and-geometry prototype. It does not currently generate fully distinct upper-storey room programs, solve all daylight/ventilation conditions, certify emergency egress or structural systems, or support arbitrary hospital/hotel/industrial complexes. Visual appeal and functional quality must be reviewed by a professional.
